Education

- **Lovely Professional University** — Punjab, India
  Bachelor of Technology - Information Technology; GPA: 8.0 — **September 2021 - June 2025**
  Courses: Operating Systems, Data Structures, Analysis Of Algorithms, Artificial Intelligence, Machine Learning, Networking, Databases

Skills Summary

- **Languages:** : Python, SQL, JavaScript, C++
- **Frameworks(AI/ML):** Machine Learning, Generative AI, LLMs, Prompt Engineering, TensorFlow, Keras, Scikit-learn, FastAPI, Streamlit, API, RAG
- **Tools:** : LangChain, Docker, Git, MySQL
- **Cloud:** : AWS, GCP, Linux

Professional Experience

- **Eduhubspot** — Bangalore, India
  Software Engineer — **July 2025 - Present**
  - **RAG-based Systems**: Developed Retrieval-Augmented Generation (RAG) pipelines integrating LLMs with vector databases, improving response accuracy by 35% and reducing hallucinations.
  - **LLM Integration**: Integrated Large Language Models (LLMs) into production systems, automating workflows and reducing manual effort by 40%.
  - **Backend Development**: Engineered scalable backend services using Python and FastAPI, reducing API response latency by 30% and supporting high concurrent requests.
- **Edureka** — Bangalore, India
  Generative AI Research Engineer — **July 2024 - July 2025**
  - **LLM-based Application Development**: Developed AI applications including SQL query generators and document Q&A systems, increasing productivity by 25% for internal users.
  - **Prompt Engineering & Optimization**: Enhanced model performance through prompt engineering, improving response relevance by 30%.
  - **API & System Integration**: Integrated third-party APIs and built scalable pipelines, reducing processing time by 20%.

Projects

- **AI Doctor for Patient Welfare (Generative AI, RAG, Healthcare AI)** — **July 2025 – Present**:
  - Developed an AI-powered medical assistant using Large Language Models (LLMs) for symptom-based recommendations.
  - Implemented Retrieval-Augmented Generation (RAG) to improve response accuracy by 35% and reduce hallucinations.
  - Optimized inference pipeline to achieve response time below 2 seconds for real-time interactions.
  - Technologies: Python, LangChain, Streamlit
- **SQL Database Chatting AI App (LLMs, Backend Development)** — **Jan 2025 – June 2025**:
  - Built an AI application to convert natural language queries into SQL for database interaction.
  - Reduced manual query effort by 50% and improved query accuracy by 30% using prompt optimization.
  - Demonstrated solution to TCS employees for AI-driven backend automation and data access.
  - Technologies: Python, Streamlit, MySQL, LLM APIs
- **README Writing Agent for GitHub (Generative AI, Automation)** — **March 2026 – April 2026**:
  - Developed an AI agent to automatically generate structured README documentation.
  - Reduced documentation effort by 60% and improved consistency across repositories.
  - Designed a frontend interface to enable seamless user interaction and content generation.
  - Technologies: JavaScript, HTML, LLM APIs

Open Source Experience

- **Arodwags Labs** — Bangalore, India
  AI Engineer (Open Source Contributor) — **Jan 2026 – Present**
  - **Project Tuna & Marlin**: Contributed to AI-driven systems by developing and optimizing LLM-based workflows and automation pipelines.
  - **CLI Claude Bot Integration**: Implemented and enhanced CLI-based AI assistant using Claude for developer productivity and task automation.
  - **LLM Engineering**: Worked on prompt engineering, API integration, and system design for scalable AI applications.
- **LeetCode** — Online Platform
  Problem Solving — **Jan 2025 – Present**
  - **Problem Solving**: Solved 190+ problems across Data Structures and Algorithms (DSA) with a focus on algorithm optimization.
  - **Efficiency**: Maintained a strong focus on coding efficiency and reducing time complexity across various problem sets.
